

>>> SoftSteel From Estex

Estex Manufacturing has been in business since 1900 and brings 50 years of combined knowledge to what goes into creating a custom case that gives your product the protection and positive image you demand.

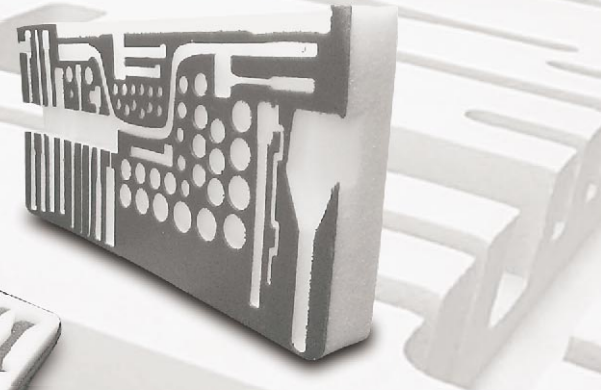

Picture: Rotary Routed foam Insert.

*** Each case is made of a durable fabric that will meet your specific needs.**

*** Soft sided cases weigh less and cost less to ship. Lighter cases are easier to carry and have great ergonomic benefit.**

*** No foam is too complicated when it involves protecting and transporting your equipment.**

*** Our die cut or rotary routed foam inserts are great for instruments, tools and fragile equipment**

*** We take the extra step to insure the correct type of foam is used for each application, taking into consideration weight, environment and application.**

*** Plastic and metal cases often will either crack or the closure will fail rendering the case useless. The Estex soft-sided case can be designed to manage environmental extremes.**

*** Our attention to detail means the quality is in the bag to make a lasting impression**
